

STEPS Towards Ecological Planet

Climate change is already causing a wide range of impacts. These climate impacts threaten both the environment and our society. It's time to act to stop the irreversible and disastrous changes to Earth's climate systems. The EU aims to be climate neutral in 2050. The schools have vital role in educating the students to be aware of prevailing situation and the threats it poses the world we are living in. The partner schools strongly need a transnational cooperation to promote subjects such as: green skills awareness and development, sharing best practices among teachers, promoting ecological behaviour and raising the awareness in our communities.

During the project period, students will be in the center of activities both in the local and transnational level. The partner schools aim at active students' participation. The educational staff and managers of the partners will also cooperate with parents and NGOs to encourage the pupils in reaching the goals of the project. The Commission develops initiatives to help work towards a European Education Area. The vision contained within this policy is that, across the EU knowing two languages in addition to one's mother tongue should be standard.

Our project will provide new opportunities to the staff and pupils to develop their foreign language skills through working with their European peers and colleagues on the mobilities and eTwinning platform. Language skills are at the heart of the vision to create "European Education Area". Learning languages enables people to both discover foreign cultures and to broaden their perspectives.
